Subject: European lamps
Cc: boatanchors@theporch.com

Sandy:

I don't think that these lamps are still produced by Osram under the names listed, but substitutes are certainly still available. Lamps in German equipment were always quite standardized. My suggestion: Look at the website of a European distributor. As an example I suggest one in Switzerland, which I occasionally use for such supplies: <http://www.distrelec.ch> - it's all in German, but you find lamps by going through the menu to:

- > Elektronik Katalog
- > Schalter / Sensoren / LED
- > Lampen
- > Signallampen.

There you find lots of types with picture, measurements and data. Sites in the UK would of course be easier, but they are less likely to have the German lamp types. I can also post your question on the European BA list, if you like, and assist in getting the lamps for you, in case the

distributor does not ship overseas.

Does anyone have some good photos of the SCR-506? I received the following request from a fellow who needs it for a detailed M-20 Scout Car model he is building.

Thanks and 73's

Mike

I found your web site by searching for radio sets used in the M-20 Scout Car used by both French and American Amoured cars. I have been told that the car used a raio called the SCR-506 radio which brings me to my request.

Do you have any pictures of this particular radio set? I am working on a fine scale model kit and I would really like to model an accurate radio to go into my vehicle.

If the model is incorrect, please send me the radio picture that was used in this vehicle if you have that information available. I am just looking for a picture if you have an electronic emailable version available.

I can offer a credit to you and the organization on my personal website (I add all my models I build to the site) and I can make a link back to your site, I think more modellers in my IPMS chapter would be interested in the radio equipment and the pictures on your site.

Thanks in advance for any assistance you can offer.

Sincerely,

Jonathon Hede

There's a pretty good 506 photo at:
<http://www.milradio.org/morepix/morepix.html> Download the
image and enlarge, the resolution is rather high. Also, be
sure to check out the MRCA homepage at:
<http://www.milradio.org>

Subject: Boatanchors and 10 Meter Transceiver for Sale
To: Old Tube Radios <boatanchors@theporch.com>
MIME-Version: 1.0
Content-Type: text/plain; charset="US-ASCII"

Content-Transfer-Encoding: 7bit

Have the following items for sale. The price INCLUDES UPS shipping to any place in the lower 48 states. Canada and others will be a little extra.

1. Kenwood TS-520 transceiver. 12BY7 driver and a pair of 6146 tubes in the final. This is from the estate of an old time ham, and has seen very little use. Rig works just as it is supposed to, and looks the same. It is doubtful if you can find a nicer one. No hidden issues with this rig. It is a fine radio for every day use, or whatever your pleasure is. Covers 80-40-20-15-10 meters, and has WWV. Built in AC supply, and this model can also be run from DC. Have the 12 VDC power cable, plus the accessory pack with microphone connector and other hardware. Comes with original manual.

I gave the rig a good workout, first on 15 CW where I had a 45 minute rag chew with a VE7. Then onto SSB where I worked a number of Europeans with no difficulty. Reports were very complimentary. Will ship at 45-50 pounds, but again, the price includes double boxed shipping. \$265.

2. Uniden HR-2510 all mode 10 meter transceiver. Covers 28.000 - 29.699 MHZ. AM/FM/SSB/CW, 25 watts PEP. Made a number of DX SSB QSOs on 10 meters with this rig. Also checked out AM and FM, and they work fine. Did not check out CW, as it requires a jumper on the accessory socket. Rig looks very nice. Comes with original box, microphone, mounting bracket, and DC power cable. Manual is included - is complete, but has writing on the front cover. Nice rig to roam 10 meters, or to use an IF for a VHF transverter. Again, from the estate of an old timer who was mostly an SWL for the past several years. \$120 (remember, UPS is included).

3. Kuhn Electronics, Inc. (of Cincinnati, Ohio) Model 353B, VHF AM/FM receiver. Circa 1960s. Uncommon receiver from the 1960s. Covers 88-174 MHZ. Built in speaker, 5 tubes. Comes with original schematic. Gave the receiver a quick smoke test, and have plenty of "hum". Most likely the electrolytic needs to be replaced. It will be a long time before I am able to get to it, so it is being offered for sale. Receiver also comes with a number of brochures and printed material about Kuhn's other products (of which there were several). \$60 will bring this unusual receiver to your doorstep via UPS.

All,

I guess this one is my fault for not checking all the negative
feedback. I was taken on a Hallicrafters radio from someone named Kelli
Tix 3400 Hoover Ave. Plover Wi. 54467. He went by the name Marina-21 on
ebay, which this person is no longer using this name on ebay. Everyone
who was taken by this person needs to look on ebay from time to time and
check and see if the same items are being resold under a different name.
The email address he was using is ktix@g2.net .Don't buy from this
person.

George

George, John, and whomever else;

This mail list is not the eBay back alley. Your grudges need to be channeled in the right direction. Besides using eBay's limited services, I would think there would be some justification to notify the offender's ISP (webmaster@, postmaster@,...etc.). Also, USPS, because there may be a case for mail fraud. The Attorney General's office of the state also. But not here, please.....

I have the worst luck with slug-tuned coils. Seems like anytime I get my tweaking

tool near one, it's only a matter of time before I hear that "tick-tick" sound that tells me the slug has broken, and I'm in trouble again...

My biggest problem is finding a source for replacement slugs. And even if I do, finding one with the proper characteristics to give the inductance change the circuit was designed for. I'd really appreciate knowing how to find suitable replacement slugs of various sizes and types with the center hex hole. If someone doesn't sell an assortment of these - they outta!

GROUP:Occasionally it's possible to enlist law enforcement to help,though I'm generally cynical about chances of success.I occasionally buy items on the net,and have run into a couple of crooks.On one occasion when audio mixer was not shipped, I filed complaint with FBI 'computer fraud unit' in Atlanta.Amazingly, I immediately received a mixer by FEDEX overnight from LA(seller was supposedly located in Atlanta and I had paid for UPS ground service from there as originally requested)!Even stranger, the shipper(a fellow from India) had packed the mixer for Fedex using shredded paper for padding and also included an unshredded copy of his current IRS form 1040,which interestingly did not mention income from his internet sales 'business' .

On another occasion, I looked up phone number for local police department in the small town where a reluctant shipper resided,discussed the problem and soon had the item.

Worth a shot. 73 de W7KPB

You can use a Postal Money Order to pay and then it becomes mail fraud.

I have had success with one-drop 'Magic Glue'... glue the broken pieces together-wipe excess off-watch your fingers.... and slug should work fine. Use the DURO brand glue if you can.

There are legitimate brokers-middlemen-to use on high-ticket items: you pay them, they hold payment to the seller until you have received and agree to accept the item, then they pay the seller. Costs a bit, but worth it. And if the seller won't sell this way, beware!.

FWIW, I sold a radio to this person or persons. But I have no complaint. Payment was received promptly in postal money order form. There seem to be 3 people using this e-mail address named Kelli, Randy and Larry Tix. I sent the radio to the address you list here.

Good luck.

It is hot as Hades here in Arkansas this week. Heat indices consistently
hover around 100 but when the boatanchor call comes you have to respond
regardless of weather or disposition. So it was when I got the call this
week to help move a friend's newly acquired Collins 20K. Both James and I
had admired the former KTHS broadcast transmitter sitting in M.L. Young's
Radio Museum but didn't realize we would have the fun of tearing it down and
moving it some day. But ML is paring down his collection and preparing to
shut the doors of the museum so the opportunity presented itself to James
and he is now the proud new owner. Some of you listmembers have visited
M.L.'s place in Hot Springs, and surely you saw this beast. Long ago the
heavy iron was removed, so that was not an issue, but still we were unable
to safely move the thing until we removed the remaining control, PS and RF

decks, carefully labeling all the wiring harness connections. The doors came off, as well as the side decorative panel (one missing), trim, and tubes. This transmitter has a similar output lineup as my Gates BC-1T. It has a pair of 833's driven by an 813, and modulated by a pair of 833's. All in a thick steel 78" high cabinet that must have weighed 700-800 pounds empty. My commercial grade furniture dolly and a 16 foot utility trailer towed by a 4X4 SUV were essential to transport up and down the hills of Hot Springs. Makes me wonder how the old timers moved stuff like this around without benefit of modern tools and techniques. At the end of the day, both James and I were tired and dirty puppies, but the 3 decks are safely at his place, and the 'too tall for his basement' cabinet in my shop. It will be interesting to compare the design and operation of this unit compared to my earlier by a decade 300-F. I think this 20K was in use in the 40's and 50's. Does anyone know when the 20K was first built? I'm still looking for a copy of the Collins Signal that had the description of the 300F, 1937 or thereabouts.

And I thoroughly enjoyed this adventure - therapy for a long year of bit twiddling.

Don,

You might want to post this message at the AM Window Board
<http://www.thebizlink.com/am/wwwboard/wwwboard.html>
which caters to hams who run BC rigs. I'm sure you'll get a good
response there. As well, there is a mailing list dedicated to amateur
AM operation and which also has a lot of traffic dealing with BC rigs
<http://www.amfone.net/Reflector.htm>

If you don't mind, I'll re-post this message for you at the AM reflector.
(Unless you already a member).
